RE: General Notice Letter for Chemetco Superfund Site, Hartford, Illinois

Dear ISRI Meeting Group:

Thank you for your February 17, 2012 letter regarding the Chemetco site (Site) in Hartford, Illinois. In your letter, the ISRI Meeting Group (Group) raised several questions. The Group's questions are in italics below followed by EPA's response. EPA anticipates discussing these questions during the next informational meeting that is scheduled for March 9, 2012 at EPA, Region 5.

(1) Why is EPA in such a hurry to have the Potentially Responsible Parties (PRPs) fund an Remedial Investigation/Feasibility Study (RI/FS) when Illinois EPA and federal EPA have been knowledgeable about the conditions of the site for more than 20 years and while the Chemetco Bankruptcy Trustee is taking remedial actions?

The Chemetco Superfund site is an uncontrolled hazardous waste site. It was listed to the National Priorities List (NPL) in March 2010, enabling EPA to spend resources responding to releases of hazardous substances from the site and to exercise its authorities under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). EPA has spent nearly two years since then helping to better secure the site and develop an enforcement case. The site is now in the Superfund process, which will lead to remedy selection and control of releases and risks posed by the site. With regard to the Chemetco Bankruptcy Trustee, the Trustee is not taking remedial actions, but is currently liquidating site assets. This liquidation does not remediate the site. At best, current work will prevent some further releases from the site by reducing the size of source areas of hazardous substances.

(2) If the PRPs are unable to form a group capable of funding the RI/FS in the short timeframe set out by EPA, is the EPA willing and able to fund it?

EPA's goal is to start the RI/FS this year using funds available to the Agency or through other CERCLA enforcement authorities.

(3) Was there any reasonable rationale (other than administrative convenience) to excluding over 1,600 PRPs as recipients of the General Notice Letter?

As discussed during the December 20, 2011 informational meeting, EPA's rationale was to identify potentially responsible parties with the most significant likely liabilities, in EPA's view, for the site, using the information that was available to EPA. The 115 recipients of the General Notice Letter were identified as either a former owner, transporters, or suppliers of more than 1 million pounds of material to the site, as reflected in the post 2000 transactional data. As mentioned previously, the group of suppliers that received a General Notice Letter from EPA in December 2011 accounted for over half of the material that was sent to the site during the timeframe covered by the transactional data we have, but we understand that additional PRPs for this site exist. Smaller customers and suppliers of materials prior to 2000 are also potentially liable. Consistent with our approach thus far, EPA will continue to focus on suppliers of materials that contained contaminants of concern for the site and ones which cannot show they are eligible for exemption from CERCLA liability under Section 127 (Superfund Recycling Equity Act).

(4) Where are the underlying documents from which the USEPA's spreadsheet contained in the January 2012 informational DVD was prepared, and are they available for review? How will information from the 104(e) responses be incorporated into the databases and EPA's Weights List?

The spreadsheets on the January 2012 informational DVD set forth the transactional data recovered from the Chemetco site. Whether hard copy documents underlying all the transactional data exist is unknown, and nothing known to directly relate to the information in the database has been compiled for review. However, the microfilm borrowed from the Estate is available for review, and, as described previously, some of it may contain images of transactional records such as scale tickets. With regard to how information from the 104 (e) responses will be incorporated, EPA will review responses to the information requests as they are received and new information will be taken into account for each specific company and incorporated into the spreadsheet.

(5) Will EPA release to us all reports of EPA and IEPA from interviews of Chemetco employees and other relevant persons?

EPA cannot release IEPA reports that EPA does not have; please contact IEPA to request such information. EPA has already released its interview record of Chemetco employees, which is included on the January 2012 informational DVD. Other interviews with relevant persons in EPA's files relating to this site can be released to the degree information found therein is releasable.

(6) What information is on the microfilm contained on the 7th floor of EPA, and has that information been secured against damage, destruction, theft or inappropriate access? Does the EPA intend to pay for the cost of putting the microfiche in a format (.pdf or copies) that is useable by the public? When will EPA reconcile the discrepancies between the number of microfilm rolls in the Records Center (our vendor counted 149) and the number of rolls (115)

represented on EPA's inventory?

As stated previously, EPA has not reviewed the microfilm. All material has been secured against damage, destruction, theft or inappropriate access and housed behind the counter in EPA Region 5's secure Records Center, where all access is logged and controlled by staff. EPA has made a microfilm reader available to the public at the EPA Region 5 Records Center, and it is hooked up to a printer. EPA does not intend to pay for the cost of putting the microfilm in electronic format (.pdf). The issue regarding discrepancies between the number of microfilm rolls in the EPA, Region 5 Record Center and the number of rolls represented in EPA's inventory has been resolved and an updated inventory was provided to the Group on March 5th.

(7) Do documents, including computer data, still remain at the site and are any of them nexus related? What action has USEPA taken, or will it take, to preserve and analyze nexus information in the possession of the bankruptcy estate? More generally, what actions will US EPA undertake to identify additional PRPs?

Yes, there are still documents remaining at the site, and some likely are nexus-related. Preservation of Chemetco records is the responsibility of the Trustee, and EPA has spoken with him about maintaining Estate records. During the September 2010 on-site records search, we inventoried, in a general sense, records left at the Chemetco site. EPA's investigation to identify additional PRPs is ongoing with records searches, corporate research, and Section 104(e) response review.

(8) Isn't EPA's Weights List ranking of the PRPs unreliable (for purposes of assigning liability, attempts to form a PRP group, etc.) since it is only based on weights-in data for a short period and does not take into account the many additional responses that EPA expects from PRPs to the 104(e) requests for information? Are there other records available to determine the volumes of any hazardous substances or other substances of concern?

The weight list is not an attempt to apportion liability for the site. It is a summary of relevant information EPA has indicating potential liability. Some records remain at the site that may provide additional information (not reflected in the transactional database) about the type and amount of materials sent to the site.

(9) EPA stated that companies that shipped only to the remote warehouses were not sent the General Notice Letter, but EPA's database as contained in the January DVD bears out differently. How and when is EPA going to deal with this discrepancy?

EPA intended to send the General Notice Letter to companies whose materials were processed at the Hartford facility, whether those materials were sent there directly or were transshipped through a Chemetco warehouse. Efforts were made to exclude transactions from our analysis (meant to identify potentially responsible parties) where a Chemetco warehouse was listed as the supplier. It is EPA's understanding that the remaining transactions are ones that involve the site and a supplier other than a Chemetco warehouse. EPA also filtered data to exclude materials that were likely traded by Chemetco (rather than sent to the furnaces at the Hartford facility), using information gathered during EPA's investigation. As we review responses to the information requests and other data presented by PRPs, we will be looking at alleged discrepancies.

(10) What is USEPA's intended scope of work for the RI/FS and what is a good estimated cost range for an RI/FS at this site?

A draft order on consent and scope of work will be circulated before the next informational meeting, which is scheduled for March 9th. The purpose of the RI/FS is to collect data to characterize site conditions; determine the nature of and extent of the waste; assess risk to human health and the environment; and for the development, screening, and detailed evaluation of alternative remedial actions. Given the number of variables and unknowns that go into the RI/FS process, a cost estimate is not available at this point, but as we stated at the December 20th meeting, a typical RI/FS costs on the scale of seven figures.

(11) Why is the US EPA proposing such a tight timeframe for negotiation when the activities causing the alleged pollution have been shut down and the site seems to have been stabilized?

It is important to note that the site has not been stabilized, despite the cessation of smelting operations. Releases of hazardous substances continue from the site to the surrounding environment, from source areas that are left in place. Additionally, although the Trustee's presence on the Site contributes to site security, there is no guarantee that the Trustee will remain at the site over the coming months or years. Given this, operating on a tight timeframe is appropriate to not only address ongoing problems but to address past and future releases of hazardous substances from the site. The site was listed to the NPL in 2010, and EPA's goal is to start the RI/FS this year. Bear in mind that EPA has not as of yet exercised its authority under Section 122 of CERCLA, which strictly limits the timeframe for negotiations.

(12) What is the status of the bankruptcy estate and what contributions can we expect from it either present or future? Why wasn't it named a PRP? How is the useful product still on the site being handled and who owns or controls title to those assets? Will the PRPs gain the benefit from money from the sale of that product?

The Trustee continues to liquidate the Estate of Chemetco's assets for the benefit of creditors in the bankruptcy proceedings. Please contact the Trustee with specific or financial questions. Both EPA and IEPA are pursuing the Estate under filed proofs of claim in bankruptcy that address past enforcement actions under the Resource Conservation and Recovery Act, Clean Water Act, and past and possible future response actions under CERCLA. The materials still on site are controlled by the Trustee. Paradigm Minerals & Environmental Services entered into an agreement with the Trustee for the right to sell or recycle to sell some of those assets. Indirectly, PRPs and EPA stand to benefit from the sale of materials from the site, which can reduce the scope of clean up/stabilization actions necessary to address source areas, and potentially provide capital back to the Estate for subsequent distribution to creditors and claimants.

(13) Who compiled the spreadsheets contained in the January DVD, and what was that person's assignment? Is that person available for interview?

The EPA Remedial Project Manager, Michelle Kerr, with the support of EPA's contractor, Toeroek Associates, Inc., and its subcontractor, TechLaw, Inc. If needed, those involved in compiling the spreadsheets that are included in the January 2012 informational DVD can be available for interview.

Thank you for contacting us and your continued attention to this matter.

Sincerely,

A handwritten signature in black ink that reads "Michelle Kerr". The signature is written in a cursive style with a long horizontal flourish at the end.

Michelle Kerr
Superfund Division
